KSP 1.12 **Retelock [1.4.2]**
Civil Defense Equipment, KSP 1.12

Release Allegro

It's no secret that some wr(KSP) contains a lot of cruft. Some of it is left over from a number of series which throughout the game's development has not contributed much to the game and therefore which is now in the process of being removed. Because this seems to be attempting to be something its attempt to undercut, but that is making the wr(in a direction an actively dangerous direction, I have decided to remove the Retelock Equipment from the game. Retelock Equipment will be removed from the game in a future update to the game (most likely KSP 1.13). Plan ahead for this change.

- Create a copy of design and place it in the saves folder to continue to use it after the upgrade to the new wr(KSP), which will be slightly incompatible with old saves.
- Ensure no dependent wr(exist in KSP. We will do our best to keep the design of the main tower, parts will be slightly incompatible.
- Create a replacement wr(mod. Lazarus & Aerobraking are two good options.
- Use the Retelock Equipment Pack to continue using the Retelock Equipment in the game.
- Use wr(Cargo parts as a replacement.

Features

- About CKS International (a fan-fic) Revamping wr(has been the main focus of the mod for a number of years.
